SUMMARY

AI/ML-focused software engineer and B.Tech CSE (AI & ML) student at VIT Bhopal who builds and deploys practical AI systems with Python, FastAPI, LLMs, RAG, NLP, and full-stack tooling (Next.js, PostgreSQL). Shipped a multi-LLM education platform now live with 35+ active users. Seeking AI/ML, backend, or GenAI engineering internships.

EDUCATION

Vellore Institute of Technology, Bhopal Sep 2024 – Oct 2028 (Expected)
B.Tech in Computer Science Engineering (AI & ML) | CGPA: 8.4/10

EXPERIENCE

AI Product Engineer (Independent Project) Sep 2026 – Present
Hirevo | AI recruiting platform for resume screening and candidate–job matching | hirevo.in

- Building the candidate–job matching pipeline: resume parsing, named-entity extraction, and skill-taxonomy mapping feeding semantic scoring with Sentence Transformer embeddings and vector search; batch-ranks **100+ resumes** per job and generates tailored interview questions.
- Developing the full stack: Next.js/TypeScript frontend, FastAPI REST backend, and Supabase (PostgreSQL) for persistence and authentication; own deployment and release.
- Implemented an LLM-powered recruiter Copilot for side-by-side candidate comparison, fit analysis, and hiring analytics.

AI Strategist 2026 – Oct 2026
AKademy38 | Australia-based EdTech | Remote

- Architected and deployed **AKademyOS**, a full-stack education platform (Next.js, FastAPI) with authentication, role-based access, real-time group chat, and multi-LLM integration; live on Vercel and Render with **35+ active users**.
- Built a **Booklet Generation Engine** that has produced **50+ production booklets**, with PDF/HTML rendering, curriculum-alignment validation, and QA pipelines; cut token cost per booklet **~10x** via prompt templating, staged generation, and shared-context reuse.
- Built **ASK AK**, an LLM doubt-solving service answering real-time student queries with context-aware responses and rate limiting, backed by PostgreSQL data models, Redis caching, and Supabase persistence.

AI/ML Engineer Intern May 2026 – Jun 2026
Pinnacle Labs | Kolkata | Remote

- Built the **Resume Intelligence Platform** as the sole engineer: ATS scoring, skill-gap detection, keyword matching, and semantic ranking of resumes against job descriptions; deployed as a public web application.
- Implemented hybrid retrieval combining BM25 with Sentence Transformer embeddings, plus analytics dashboards and report generation (Python, FastAPI, Streamlit, Scikit-learn), covering ingestion through deployment.

PROJECTS

Explainable RAG QA System | Python, FastAPI, LangChain, ChromaDB, BM25, Groq GitHub

- Built a hybrid retrieval pipeline fusing BM25 sparse and dense vector search (α = 0.65) with semantic chunking, reranking, and incremental indexing to ground answers in retrieved sources; achieved **MRR 0.84** at **~45 ms** latency.

Plant Disease Detection & Analysis System | Python, PyTorch, OpenCV, Streamlit, Scikit-learn GitHub

- Fine-tuned MobileNetV2 via transfer learning to **99.25% test accuracy** (98.9% macro F1) on 54K PlantVillage leaf images across 38 crop–disease classes; built a Streamlit app with OpenCV preprocessing and top-3 confidence scoring.

Heart Disease Prediction System | Python, Scikit-learn, XGBoost, FastAPI, Docker GitHub

- Designed a stacking ensemble reaching **0.94 ROC-AUC** and documented its calibration and small-dataset limitations instead of relying on a single metric; containerized with Docker and served real-time inference through FastAPI.

TECHNICAL SKILLS

Languages:	Python, TypeScript, SQL, C++, R
AI/ML:	LLMs, Generative AI, RAG (hybrid BM25 + dense, reranking), NLP, Embeddings, Semantic Search, Prompt Engineering, Function Calling
ML Libraries:	PyTorch, Scikit-learn, XGBoost, Pandas, LangChain, Sentence Transformers, Hugging Face
Backend:	FastAPI (async), REST APIs, Pydantic, Redis, Authentication & Role-Based Access
Frontend:	Next.js, React, Streamlit
Databases:	PostgreSQL, Supabase, ChromaDB (vector DB)
LLM Platforms:	Groq, Vertex AI
DevOps & Tools:	Docker, Git, AWS, Vercel, Render

CERTIFICATIONS & ACHIEVEMENTS

- DataForge Hackathon Finalist, IIT Roorkee E-Summit 2026
- GirlScript Summer of Code (GSSoC '26), Open Source Contributor, Jun – Aug 2026
- Cloud Computing, NPTEL (Course Topper, Score: 86%)
