SUMMARY

Production-focused AI/ML Engineer architecting and deploying AI SaaS platforms with multi-LLM pipelines, retrieval-augmented generation, and intelligent automation. Built and own AKademyOS — a deployed education platform with AI-powered content generation, real-time communication, and a production doubt-solving engine. Designs end-to-end system architecture across FastAPI, Next.js, PostgreSQL, Redis, and modern cloud infrastructure.

TECHNICAL SKILLS

Languages: Python, TypeScript, C++, SQL

AI/ML: LLMs, RAG (Hybrid BM25 + Dense Retrieval, Reranking), Embeddings, Prompt Engineering, NLP, Function Calling

Frameworks: LangChain, Sentence Transformers, Hugging Face, PyTorch, Scikit-learn

Backend: FastAPI (Async), REST APIs, Pydantic, Redis

Frontend: Next.js, React

Databases: PostgreSQL, Supabase, ChromaDB (Vector DB)

Cloud & DevOps: Docker, Vercel, Render, Groq, Vertex AI, Git

EXPERIENCE

AI Strategist

2026 – Present

AKademy38 (Australia-based EdTech, Remote)

- Architected AKademyOS, a full-stack education platform (Next.js + FastAPI) with authentication, role-based access, real-time group chat, and multi-LLM AI integration — deployed on Vercel and Render serving 35+ active users.
- Engineered a multi-LLM Booklet Generation Engine replacing manual workflows with a deterministic AI pipeline, generating 50+ production booklets with automated PDF/HTML rendering and curriculum-aligned content validation.
- Reduced token cost per booklet ~10x through versioned prompt templating, staged generation, and shared-context reuse, cutting per-booklet usage from ~40% to ~4% of prior budget.
- Built ASK AK, a production LLM-powered doubt-solving engine with rate limiting and context-aware responses, handling real-time student queries at scale.
- Designed end-to-end backend architecture: PostgreSQL data modeling, Redis caching, Supabase persistence, auth flows, and automated quality assurance pipelines for generated content.

AI/ML Engineer (Intern) — Sole Engineer

2025 – 2026

Pinnacle Labs (Kolkata, Remote)

- Built and shipped the Resume Intelligence Platform end-to-end — delivering ATS scoring, skill-gap detection, and semantic candidate ranking as a publicly deployed application.
- Engineered hybrid retrieval with Sentence Transformer embedding pipelines and BM25, owning system architecture from data ingestion through production deployment.

PROJECTS

HireLens — AI Recruitment Intelligence Platform | Next.js, TypeScript, FastAPI, Sentence Transformers, Supabase

- Building an AI-powered recruitment platform with multi-stage NLP pipeline (extraction → NER → taxonomy matching → semantic scoring), batch processing of 100+ resumes, automated candidate ranking, and AI-generated personalized interview questions.
- Architecting with Supabase persistence, authentication, vector search via Sentence Transformer embeddings, and an AI Copilot for recruiter-assisted candidate comparison and analytics.

Explainable RAG QA System | Python, FastAPI, ChromaDB, LangChain, BM25, Groq

- Built a hybrid retrieval pipeline fusing BM25 sparse and dense vector search ($\alpha=0.65$) for hallucination-resistant QA; achieved MRR 0.84 and ~45 ms latency with semantic chunking, reranking, and incremental indexing.

Heart Disease Prediction System | Python, Scikit-learn, XGBoost, Docker

- Designed a stacking ensemble reaching 0.94 ROC-AUC; research identified calibration and dataset-size limitations in single-metric clinical evaluation. Containerized for real-time inference via FastAPI.

EDUCATION

Vellore Institute of Technology, Bhopal

Sep 2024 – Oct 2028

B.Tech in Computer Science Engineering (AI & ML) | CGPA: 8.4

CERTIFICATIONS & ACHIEVEMENTS

- DataForge Hackathon Finalist — IIT Roorkee E-Summit 2026
- Cloud Computing — NPTEL (Course Topper, Score: 86%)
- Applied Machine Learning in Python — University of Michigan (Coursera)
- Google Cloud Certifications: Gemini API, Multimodal RAG, Generative AI
