Summary

AIML student at VIT Bhopal with hands-on experience building RAG systems, FastAPI backends, and ensemble ML pipelines. Developed AI applications using LangChain, ChromaDB, XGBoost, and Groq APIs with focus on practical deployment and scalable retrieval systems.

Education

Vellore Institute of Technology, Bhopal

B.Tech in Computer Science Engineering (AI & ML)

Sep 2024 – Oct 2028

CGPA: 8.4

Technical Skills

Languages: Python, C++, SQL

ML/AI: Scikit-learn, XGBoost, PyTorch, LangChain, RAG, BM25, Sentence Transformers, NLP, Hybrid Retrieval, Embedding Models, Ensemble Learning

Backend/Tools: FastAPI, Streamlit, ChromaDB, PyMuPDF, Git, GitHub, Vertex AI, Docker

Data: Pandas, NumPy, EDA, Feature Engineering, Statistical Modeling, Data Visualization

Experience

Artificial Intelligence Intern — Pinnacle Labs

May 2026 – Present

- Developed Python-based AI modules and FastAPI backend integrations for ML workflow automation and API deployment.
- Improved reliability of existing ML pipelines through debugging, testing, and optimization of inference workflows.

Projects

Resume Parser & Job Matcher

GitHub

Python, FastAPI, NLP, Sentence Transformers, PyMuPDF, Streamlit

- Built an AI-powered resume parsing platform that extracts candidate information from PDF resumes using PyMuPDF and NLP, converting unstructured documents into structured recruiter-ready profiles.
- Implemented semantic job matching via Sentence Transformers embeddings to score resumes against job descriptions, with automated skills extraction, education parsing, and experience identification.
- Designed an end-to-end FastAPI backend with file upload support and interactive Streamlit dashboard for resume screening and candidate analytics.

Explainable RAG QA System

GitHub

Python, FastAPI, ChromaDB, LangChain, BM25, Groq API

- Built a hybrid retrieval pipeline combining BM25 sparse retrieval with dense vector search for source-grounded question answering.
- Implemented incremental document indexing with automated PDF/JSON ingestion, chunking, and embedding generation; reduced retrieval latency via reranking and deployed REST APIs using FastAPI.

Heart Disease Prediction System

GitHub

Python, Scikit-learn, XGBoost, FastAPI, Streamlit

- Developed a stacking ensemble model achieving **89.13% accuracy** and **0.94 AUC** on the UCI Heart Disease dataset through end-to-end ML workflow including EDA, feature engineering, and cross-validated training.
- Deployed prediction APIs using FastAPI with a Streamlit interface for real-time clinical inference.

Certifications & Achievements

- DataForge Hackathon Finalist – E-Summit 2026, VIT Bhopal
- Applied Machine Learning in Python – University of Michigan
- Google Cloud Certifications in Gemini, Multimodal RAG, and Generative AI
